## SAFETY FIRST:

- Nail Hammers are for driving and withdrawing common nails only.
- Drilling Hammers are intended to be used for striking chisels, punches, star drills and hardened nails.
- Ball Peen Hammers have two separate uses. The flat striking face of the ball peen is used for striking punches and chisels. The rounded ball peen end is used for riveting, shaping, and straightening unhardened metals.
- When striking a struck tool (chisel, punch, or countersink), the striking face of the hammer should have a diameter at least 3/8" larger than the face of the struck tool.
- Drywall Hammers are for scoring and installing drywall.
- Shingler's Hatchets are for installing and trimming composition, wood, and fiberglass shingles .
- Bricklayer Hammers are for setting or splitting bricks.
